EXICOM wins 2nd set of Electric Vehicle (EV) Chargers under the EESL Procurement Program

New Delhi, Friday, April 20, 2018: EXICOM has won tender to deploy EV chargers under the Energy Efficiency Services Limited (EESL) procurement program at different locations in the country. These include 1800 numbers of 3.3 kW AC Chargers and 200 numbers of 15kW DC Fast Chargers. These will be used to charge the TATA Tigor and Mahindra e-Verito cars procured by EESL. Fully compliant with the Bharat AC and DC specifications released by the Department of Heavy Industries (DHI) earlier this year, it will allow consumers to pay through multiple options (Debit/Credit Card, BHIM as well as UPI).

Anant Nahata, Managing Director of Exicom said, "We are grateful and excited to participate in this project and support the ambitious plan of Indian Government and NITI Aayog to push Electric vehicles. We thank EESL for their efforts in consolidating this market and providing necessary impetus to the industry. This will also drive down costs & carbon emissions. Such initiatives will create local manufacturing facilities and grow technical competencies for the long-term growth of the EV industry in India".

The company has already been empaneled by leading automobile manufacturers in India and is actively working to collaborate with both public and private organizations. Presently EXICOM is offering both EV Charging solutions for home and public charging for 2W, 3W, Passenger Cars and Commercial Vehicles. Well suited for Indian rugged conditions, these are suitable for deployment at residential, commercial and parking locations.

About EXICOM

Exicom Tele-Systems is headquartered in Gurgaon, India with growing global presence. The company has over two decades of experience in designing, engineering and manufacturing efficient, reliable and cost effective power and energy solutions for electric vehicles, information technology, telecom and renewables sector. All our deployments are backed by state-of-the-art R&D centre, manufacturing setup and pan India service support. Exicom is also the largest supplier of Li-ion batteries with deployment of ~1Gwh of battery solutions. The company has successfully deployed AC and DC Fast Chargers for various customers including government PSU's, fleet operators and Auto OEM's etc.

Exicom Mobility division provides Li-ion battery and charging infrastructure solutions for EV applications including 2 wheeler, 3 wheeler, passenger cars and commercial transport.
